Arabandi Rambabu

AI Engineer | Voice AI, Agentic Systems & Developer Tooling

Hyderabad, India | +91 9704412826 | rambabuarabandi2001@gmail.com

linkedin.com/in/rambabuarabandi | github.com/rambabu-143

SUMMARY

AI Engineer building production voice agents, agentic workflows, and developer tooling. Shipped a voice AI agent handling 500+ daily customer calls and built MCP server scaffolding and n8n automation for enterprise workflows. Combines Python and TypeScript development with API integration, GraphRAG retrieval, and evaluation using RAGAS and DeepEval to deliver AI applications end to end.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Go

Agents & Automation: LangChain, LangGraph, Vercel AI SDK, tool calling, MCP, n8n

Retrieval: GraphRAG, FalkorDB, hybrid search (BM25 + vector), RRF fusion, cross-encoder reranking

Evaluation: RAGAS, DeepEval

Voice AI: LiveKit Agents, Sarvam AI, real-time speech-to-text and text-to-speech

Application Development: React, Next.js, Node.js, Express, FastAPI, REST APIs, Tailwind CSS

Data & Cloud: MongoDB, PostgreSQL, Supabase, Google Cloud Platform (GCP , AWS), Docker, Git

EXPERIENCE

AI Engineer Mar 2026 – Sep 2026

Arohak Inc. *Hyderabad, India*

Client engagement: Johnson & Johnson, via Cognizant

- Built an internal Go CLI that generates runnable MCP server projects, including boilerplate, tool and resource registration, and configuration wiring; used DeepEval to test the MCP tooling.
- Contributed to building and evaluating an internal GraphRAG pipeline for Johnson & Johnson, combining vector similarity search with graph traversal to retrieve context across related documents.
- Built and deployed n8n workflows connecting multi-step data pipelines, webhooks, and agent triggers to automate manual handoffs.

Generative AI Engineer (Contract) Jul 2025 – Feb 2026

Cyepro Solutions *Hyderabad, India*

- Architected and shipped Zaya, a real-time voice AI agent handling 500+ daily customer calls for a US auto dealership DMS platform.
- Built agent workflows with dynamic tool routing and conversation memory; owned authentication, webhooks, and structured data exchange with dealership APIs for inventory and scheduling.

Software Development Engineer Apr 2024 – Apr 2025

Ordermatic Technologies *Hyderabad, India*

- Developed frontend and backend features for a live restaurant POS system covering billing, CRM, and inventory using React, Node.js, and Express.
- Addressed production edge cases and expanded test coverage across application workflows.

Software Development Intern Jan 2024 – Apr 2024

Gymclan Fitness Services Pvt Ltd *Hyderabad, India*

- Developed frontend and backend functionality for FitPaa, Gymclan's fitness product, using MongoDB, Express, React, and Node.js.

SELECTED PROJECTS

MCP Server Scaffolding CLI

Go, Model Context Protocol, DeepEval | Johnson & Johnson engagement

- Created a single-command workflow for generating MCP server project structure, tool and resource registration, and configuration wiring.
- Generated a runnable baseline so internal teams could begin implementing integration-specific functionality from a consistent project structure.
- Designed the generated structure to support additional tools and resources without changes to the core scaffolding code.
- Used DeepEval to test the MCP tooling created for the engagement.

GraphRAG Knowledge Retrieval Pipeline

GraphRAG, Vector Search, LLMs, RAGAS, DeepEval

- Contributed to retrieval and answer-generation components for internal knowledge queries spanning related documents.
- Combined vector similarity results with graph traversal, using entity relationships to assemble connected context for multi-hop questions.
- Iterated on how graph and vector results were combined before passing retrieved context to the LLM.
- Evaluated the Johnson & Johnson RAG pipeline using RAGAS and DeepEval alongside contributions to its implementation.

Zaya – Voice AI Agent for Auto Dealerships

LiveKit Agents, Sarvam AI, FastAPI, Python

- Implemented a real-time speech-to-text, LLM tool-calling, and text-to-speech pipeline with turn management for dealership customer conversations.
- Connected tool calls to dealership inventory and scheduling APIs through authenticated integrations and structured data exchange.
- Added timeout handling, retry logic, and fallback routing to support resilience in the call path.

SPEAKING & TEACHING

Speaker at NOVA 2026 (ACM GRIET) on MCP, A2A protocols, and AI-native development. Teach agentic systems, RAG, and production deployment to students, professionals, and founders.

EDUCATION

B.Tech in Computer Science Engineering 2019 – 2023
Bharat Institute of Engineering and Technology Hyderabad, India
