SUMMARY

AI engineer with nearly 3 years of experience building and shipping agentic systems end to end: MCP tooling, n8n automation, GraphRAG, and multi-agent workflows, plus a production voice AI agent handling 500+ daily calls for a US auto dealership platform.

TECHNICAL SKILLS

AI and Agents: LLM integrations, prompt engineering, tool calling, agent orchestration, multi-agent systems, guardrails
MCP and Automation: MCP servers, CLI tooling, n8n workflows, webhook-driven pipelines, API integration
Voice AI: LiveKit Agents, Sarvam AI, real-time STT/TTS pipelines, low-latency turn management
RAG and Retrieval: Hybrid retrieval (BM25 + vector), GraphRAG, FalkorDB, RRF fusion, cross-encoder reranking
Frameworks and Tools: LangChain, LangGraph, Vercel AI SDK, Claude Code, Cursor
Full-Stack: React, Next.js (App Router), Node.js/Express, FastAPI, REST APIs, auth flows, Tailwind CSS
Data, Cloud and DevOps: MongoDB, PostgreSQL, Supabase, AWS, GCP, Docker, Git
Languages: Python, TypeScript, JavaScript

EXPERIENCE

AI Engineer **Mar 2026 – Sep 2026**
Arohak Inc. – J&J engagement via Cognizant *Hyderabad, India*

- Designed and shipped an internal Go CLI that scaffolds MCP (Model Context Protocol) servers end to end, generating project boilerplate, tool and resource registration, and config wiring, cutting a new MCP integration from hand-built work to minutes.
- Contributed to a GraphRAG pipeline for internal knowledge retrieval, combining vector and graph-based retrieval to improve answer quality on complex, multi-hop queries.
- Built and deployed n8n automation systems: multi-step data pipelines with webhook-driven agent triggers and event-based orchestration that replaced manual handoffs and ran unattended in production.

Generative AI Engineer (Contract) **Jul 2025 – Feb 2026**
Cyepro Solutions *Hyderabad, India*

- Architected and shipped Zaya, a production real-time voice AI agent for a US auto dealership DMS platform (details under Projects).
- Built multi-tool agentic workflows with dynamic routing, memory-driven conversations, and structured tool contracts, and owned the DMS integration layer: auth flows, webhook handling, and structured data exchange with dealership APIs.

Software Development Engineer **Apr 2024 – Apr 2025**
Ordermatic Technologies *Hyderabad, India*

- Contributed full-stack to a live restaurant POS system across billing, CRM, and inventory (React, Node.js/Express), and reduced production defects through systematic edge-case handling and improved test coverage.

Software Development Intern **Jan 2024 – Apr 2024**
Gymclan Fitness Services Pvt Ltd *Hyderabad, India*

- Worked across the full MERN stack (MongoDB, Express, React, Node.js) on the website of FitPaa, Gymclan's fitness product, covering both frontend and backend.

SELECTED PROJECTS

Zaya – Voice AI Agent for Auto Dealerships | *LiveKit Agents, Sarvam AI, FastAPI, Python*

- Production real-time voice AI agent handling 500+ daily customer calls for a US auto dealership DMS platform, with a full STT to LLM tool-calling to TTS pipeline, a sub-400ms latency target, and real-time turn management.
- Built resilience into the call path (timeout handling, retry logic, and safe fallback routing), plus the auth and webhook layer connecting the agent to dealership APIs for live inventory and scheduling data.

MCP Server Scaffolding CLI (Johnson & Johnson Engagement) | *Go, Model Context Protocol*

- Built an internal command-line tool that scaffolds MCP servers end to end, generating project structure, tool and resource registration, and configuration in one step.
- Turned a multi-day manual setup for each new MCP integration into a single command, standardizing how internal teams build and register MCP servers.
- Designed the generated project structure so new tools and resources can be registered without changing core scaffolding code.
- Generated configuration wiring and a working baseline in each scaffolded server, so teams start from a runnable project rather than an empty directory.

GraphRAG Knowledge Retrieval Pipeline | *GraphRAG, Vector Search, LLMs*

- Built and extended a GraphRAG pipeline for internal knowledge retrieval, combining vector similarity search with graph-based traversal.
- Improved answer quality on complex, multi-hop questions that a vector-only approach handled poorly.
- Used entity relationships from the graph to pull connected context into answers, so queries spanning several related documents return more complete results.
- Worked on retrieval and answer-generation components of the pipeline, iterating on how graph and vector results are combined before they reach the LLM.

SPEAKING AND TEACHING

- Speaker at NOVA 2026 (ACM GRIET) on MCP, A2A protocols, and AI-native development; teach AI engineering (agentic systems, RAG, production deployment) to students, professionals, and founders.

EDUCATION

B.Tech in Computer Science Engineering **2019 – 2023**
Bharat Institute of Engineering and Technology *Hyderabad, India*
